- 1) Start with a new 400x120 image
 - 2) Create your text you want
make sure it is in black
 - 3) Duplicate your text layer twice
 - 4) On the original text layer go to
Filter>Pixelate>Mosaic, and choose
a cell size value of 12 (or other)
 - 5) Now leave the first duplicate text layer
and on the very top layer add a gaussian
blur with a value of 2.5 pixels
- That is all you may have to try different settings
depending on which font type you use
