

Wooden Sign

© Patrick Landry

1) Start with a new image, size does not matter

2) Create a new layer & using the lasso tool, make your selection that you want your sign.

3) Feather your selection by one pixel then fill it with a color of 996600, after that fill it with white (ffffff)

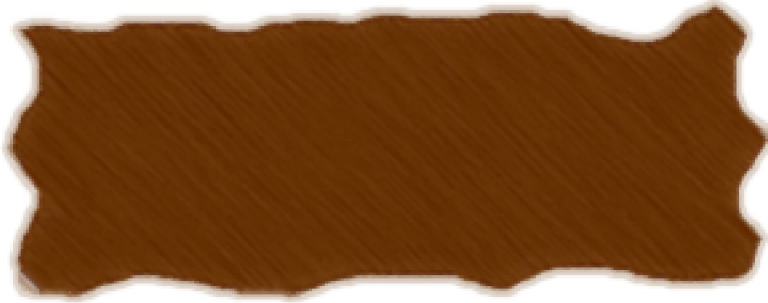

4) Now create a new layer and with your selection still active contract it by 2 pixels and then fill it a color of brown (673204)

5) Now go to Filter>Noise>Add Noise and set the amount to 3% and make sure you check Gaussian & Monochromatic

6) Now apply the angled strokes filter with 50 for direction, 15 for stroke Length and a sharpness value of 3

7) Now add a gaussian blur of around 0.5

That is all. You can now add some text over it or do something else with it!

And a different sign
